Subject: Application for Full Stack Developer Position

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Developer role at [Company Name]. With a strong background in **Java, Spring Boot, PostgreSQL, and Docker**, I have designed and deployed API-driven systems for healthcare and SaaS products, consistently delivering scalable solutions and measurable impact.

At **Basil Hut Pvt. Ltd.**, I delivered a **Hospital Information Management System** used across 7 clinics, handling 10,000+ patient records monthly and reducing administrative workload by 25%. I also built a **Feedback Management System** that improved patient engagement by 30% and automated deployments with Docker and Azure pipelines, reducing release cycles by 40%. These experiences sharpened my ability to turn business needs into reliable, production-ready systems.

In addition to professional work, I created open-source projects that reflect my problem-solving mindset. **Webhook Inbox** is a RequestBin-style webhook debugger with real-time monitoring, while **EchoStreamProxy** is a lightweight proxy and scheduler handling 1,000+ daily requests with SSE dashboards and retry logic. Both demonstrate my focus on **resilience, real-time systems, and developer experience**.

I am eager to bring my technical expertise and collaborative approach to [Company Name], contributing to projects that demand both reliability and innovation. I would welcome the opportunity to discuss how my skills and experience align with your team's goals.

Thank you for your time and consideration.

Sincerely,
Rajesh
